1.0 Introduction to Web Tools

This document contains a Reference Guide to the eVS international label APIs: Priority Mail Express International, Priority Mail International, Global Express Guaranteed (see section IV for limitations) and First Class Mail International (First Class Package International Service). See the Developer's Guide to learn the administrative process for gaining access to the Web Tools APIs as well as the basic mechanism for calling the APIs and processing the results. The Developer's Guide also contains information on testing and trouble-shooting.

Note: The Request Parameter sections present the XML input tags for generating live requests along with the restrictions on the values allowed. An error message will be returned if an incorrect value is entered. Also, be aware of the maximum character amounts allowed for some tags. If the user enters more than those amounts, an error will not be generated. **The Web Tool will simply process the characters up to the maximum amount allowed and disregard the rest.** This is important since the resulting value could prevent a correct response.

When building the XML request, pay particular attention to the **order and case** for tags. An error message will be returned if an incorrect value is entered. Remember that all data and attribute values in this document are for illustration purposes and are to be replaced by your actual values. For instance, a line of sample code may be:

```
<Pounds>2</Pounds>
```

In this instance, you will replace "2" with the weight in pounds for the package.

1.1 Before you get started:

Whether you are a new or existing mailer, USPS strongly suggests a conversation with you to discuss your business requirements so your account will be properly configured. To initiate this conversation please contact the National Customer Support Center (NCSC) at 877-264-9693 Option 4 and request a referral to an Operations Integration Specialist (OIS) and Technical Integration Specialist (TIS). USPS will align the appropriate team to assist with swift onboarding.

Depending on your needs, your account may be configured in many flexible ways; however, each account will be configured with credentials in a master/child relationship. Minimally, credentials will be established as follows:

- A master Mailer ID is created
 - Child Mailer IDs are created for each origin site and may be created as needed by the requirements of your business units and brands.
- A permit number is created
 - Additional permit numbers may be created as needed by the requirements of your business units and brands
- A CAPS Debit account is created for payment processing
 - Additional CAPS Debit accounts may be created as needed

Your Operations Integration Specialist and Technical Integration Specialist will be involved at the local and national levels to ensure successful launch and introduction to appropriate production support teams.

For information on registering and getting started with Web Tools, please refer to the Step-By-Step guide found on the Technical Documentation section of the Web Tools page on usps.com/webtools.

Label APIs require extra permissions; contact the Internet Customer Care Center (uspstechnicalsupport@mailps.custhelp.com) to request access. Indicate “Label API Access” in the subject line and explain in the body of the email:

1. How the shipper intends to purchase and apply postage to the labels
2. If the label image provided by the API will be modified in any way by the shipper or the software

2.0 eVS Priority Mail Express International Label API

2.1 Overview

The eVS Priority Mail Express International Label API lets customers generate eVS Priority Mail Express International labels given the weight and dimensions of the item.

Note: Scan form is eligible for eVS if the HoldForManifest is Y (Yes).

2.2 API Signature

Scheme	Host	Path	API	XML
https://	secure.shippingapis.com	/ShippingAPI.dll?	API=eVSExpressMailIntl	&XML=(see Tag Descriptions below)
https://	secure.shippingapis.com	/ShippingAPI.dll?	API=eVSExpressMailIntlCertify	&XML=(see Tag Descriptions below)

Note: The “eVSExpressMailIntlCertify” API signature is for testing purposes and will not generate usable labels and barcodes.

2.6 Error Responses

Error conditions are handled at the main XML document level and Package node level. When parsing, it is best to check for an error document first before checking for good data. Error documents have the following format:

```
<Error>
  <Number></Number>
  <Source></Source>
  <Description></Description>
  <HelpFile></HelpFile>
  <HelpContext></HelpContext>
</Error>
```

Where:

- Number = the error number generated by the Web Tools server.
- Source = the component and interface that generated the error on the Web Tools server.
- Description = the error description.
- HelpFile = [reserved for future use].
- HelpContext = [reserved for future use].

An <Error> element may be returned at the top (response) level if there is a problem with the syntax of the request, or if a system error occurs.

If you need assistance with an error response, contact the Internet Customer Care Center
uspstechnicalsupport@mailps.custhelp.com.

3.0 eVS Priority Mail International Label API

3.1 Overview

The eVS Priority Mail Express International Label API lets customers generate eVS Priority Mail Express International labels given the weight and dimensions of the item.

3.2 API Signature

Scheme	Host	Path	API	XML
https://	secure.shippingapis.com	/ShippingAPI.dll?	API=eVSPriorityMailIntl	&XML=(see Tag Descriptions below)
https://	secure.shippingapis.com	/ShippingAPI.dll?	API=eVSPriorityMailIntlCertify	&XML=(see Tag Descriptions below)

Note: The “eVSPriorityMailIntlCertify” API signature is for testing purposes and will not generate usable labels and barcodes.

eVSPriorityMailIntl Request / ShippingContents / ItemDetail / CountryOfOrigin	required	For commercial items only. Country of Origin means the country where the goods originated, e.g. were produced, manufactured, or assembled. It is recommended you supply this information and attach an invoice to the outside to accelerate customs clearance in processing the items. The country name entered must match an entry from the USPS-approved International Index of Countries and Localities or be "United States". (http://pe.usps.gov/text/Imm/Immctry.htm - click on the link for "International Country Listings.") Using a country name not on the list will result in a request failure. See Appendix A for Abbreviations. For example: <CountryOfOrigin>United States</CountryOfOrigin>	String	
eVSPriorityMailIntl Request / Insured	optional	Restricted use: authorized users may indicate with a value of Y that the item is insured for purposes of obtaining a barcode number from the insured range. All other users must specify N or omit.	string	default=N enumeration=Y enumeration=N
eVSPriorityMailIntl Request / InsuredNumber	optional	For backward-compatibility; not validated.	string

3.6 Error Responses

Error conditions are handled at the main XML document level and Package node level. When parsing, it is best to check for an error document first before checking for good data. Error documents have the following format:

```
<Error>
  <Number></Number>
  <Source></Source>
  <Description></Description>
  <HelpFile></HelpFile>
  <HelpContext></HelpContext>
</Error>
```

Where:

- Number = the error number generated by the Web Tools server.
- Source = the component and interface that generated the error on the Web Tools server.
- Description = the error description.
- HelpFile = [reserved for future use].
- HelpContext = [reserved for future use].

An <Error> element may be returned at the top (response) level if there is a problem with the syntax of the request, or if a system error occurs.

If you need assistance with an error response, contact the Internet Customer Care Center
uspstechnicalsupport@mailps.custhelp.com.

4.0 eVS First Class Mail International Label API

4.1 Overview

The First Class Mail International Label API lets customers generate First Class International labels given the weight and dimensions of the item.

Postal packages containing medicaments and not satisfying the above-mentioned conditions will be returned to the senders or, if abandoned, treated as undeliverable items.

Postage stamps are admitted only in registered shipments.

Saccharine and other artificial sweeteners for artificial beverages require permission from the Brazilian Department of Public Health for importation.

</Restrictions>

<Observations>

1. Brazil reserves the right to collect a "presentation-to-Customs charge" from customers for any item submitted to customs control, even if no customs charges are levied.

2. Import licenses are required for many kinds of goods and senders should ascertain from the addressee before mailing that the necessary documents are held.

3. Imports are allowed by mail, including mail order catalog shipments, up to a value of U.S. \$500 (U.S. \$1000 for computer software) without the requirement of an import license provided the item is not for resale. Shipments valued at no more than U.S. \$50 are duty free and are delivered to the addressee; shipments above U.S. \$50 can be picked up at the post office upon payment of import duties. Imports that are prohibited or subject to special regulations must comply with applicable Brazilian government provisions. Identical shipments from the same source to the same person or address in Brazil within a 90 day period are considered part of the same shipment and may be subject to confiscation. Other merchandise that usually enters duty free includes items such as newspapers, maps, books, and magazines.

4. Shipments for which an import permit has not been issued are considered contraband and confiscated.

5. Shipments that do not indicate the applicable postage and fees on PS Form 2976-A will hinder the customs clearance process, causing delays to clear the items.

6. Used consumer goods may only be sent to charitable organizations that are recognized by the Brazilian government as being entities which serve the public interest.

4.6 Error Responses

Error conditions are handled at the main XML document level and Package node level. When parsing, it is best to check for an error document first before checking for good data. Error documents have the following format:

```
<Error>
  <Number></Number>
  <Source></Source>
  <Description></Description>
  <HelpFile></HelpFile>
  <HelpContext></HelpContext>
</Error>
```

Where:

- Number = the error number generated by the Web Tools server.
- Source = the component and interface that generated the error on the Web Tools server.
- Description = the error description.
- HelpFile = [reserved for future use].
- HelpContext = [reserved for future use].

An <Error> element may be returned at the top (response) level if there is a problem with the syntax of the request, or if a system error occurs.

If you need assistance with an error response, contact the Internet Customer Care Center uspstechnicalsupport@mailps.custhelp.com.

5.0 eVS GXG Get Label API

5.1 Overview

Global Express Guaranteed is our fastest international shipping service, with transportation and delivery by FedEx Express. It features date-certain delivery in 1-3 business days* to more than 190 countries with a money-back guarantee** to all destinations. This document contains a Reference Guide to the eVS GXG Get Label Request.

Please note that the GXG airway bill image is not currently supported in the response. The API returns the appropriate barcode numbers but requires the integrator to produce the GXG airway bill image.

5.6 Error Responses

Error conditions are handled at the main XML document level and Package node level. When parsing, it is best to check for an error document first before checking for good data. Error documents have the following format:

```
<Error>
  <Number></Number>
  <Source></Source>
  <Description></Description>
  <HelpFile></HelpFile>
  <HelpContext></HelpContext>
</Error>
```

Where:

- Number = the error number generated by the Web Tools server.
- Source = the component and interface that generated the error on the Web Tools server.
- Description = the error description.
- HelpFile = [reserved for future use].
- HelpContext = [reserved for future use].

An <Error> element may be returned at the top (response) level if there is a problem with the syntax of the request, or if a system error occurs.

If you need assistance with an error response, contact the Internet Customer Care Center uspstechnicalsupport@mailps.custhelp.com.

6.5 Error Responses

Error conditions are handled at the main XML document level. When parsing, it is best to check for an error document first before checking for good data. Error documents have the following format:

```
<Error>
  <Number></Number>
  <Source></Source>
  <Description></Description>
  <HelpFile></HelpFile>
  <HelpContext></HelpContext>
</Error>
```

Where:

- Number = the error number generated by the Web Tools server.
- Source = the component and interface that generated the error on the Web Tools server.
- Description = the error description.
- HelpFile = [reserved for future use].
- HelpContext = [reserved for future use].

Errors that are further down in the hierarchy also follow the above format.

An <Error> element may be returned at the top (response) level if there is a problem with the syntax of the request, or if a system error occurs.

If you need assistance with an error response, contact the Internet Customer Care Center (uspstechnicalsupport@mailps.custhelp.com)
